Introducing the 29 Card Punch and 59 Card Verifier

The IBM 29 Card Punch and IBM 59 Card Verifier are the key entry machines to support the IBM System/360. These machines process the expanded character set associated with the new programming language. A modern appearance, increased throughput, increased operator acceptance, increased servicability, and a more quiet operation, are a result of; new covers, new internal circuitry, and new operating features.

Highlights

- **Expanded Character Set:** Allows punching, printing, and verifying of additional codes required for IBM System/360.
- **New Covers:** Enhance appearance and reduce noise.
- **Two Separate Program Levels:** Allow multiple changes between program levels within a card as well as at the start of a card.
- **Clear Key:** Causes multiple register and release cycles without feeding until the card transport is clear of all cards.
- **Left-Zero Function:** Provides automatic punching and verification of zeros to the left of significant digits under program control.
- **Erasability:** In conjunction with left-zero function, allows the operator to correct the information in a left-zero field before it is punched in the card.
- **Printing:** Available on the IBM 29, as a pluggable feature, through the interchange of base units.
- **High Speed Verification:** Allows auto verification of a card at 80 column per second under program control.
- **Automatic Verification of Blank Columns:** Possible at auto verify speed under key control.

Technology

IBM 29 and IBM 59

- **Reed Relays and Printed Circuit Techniques:** Replace wire contact relays and tubes.
 - **Major Units are Pluggable:** An aid for feature installation and servicability.
- IBM 29*
- **Print Unit:** Capable of printing entire 64 character set.
 - **Punch Unit:** Capable of punching more than three holes per column.

IBM 59

- **Optical Sensing:** Eliminates the mechanical verifier drive and pin-sense assemblies. This will significantly lower the machine maintenance requirements by reducing the number of adjustments.
- **A Photoemitter:** Replaces the program cam contacts and gates the impulses through the starwheel contacts to improve reliability.

CE Features

IBM 29

- **Switch:** Single-cycle (on automatic left zero machine).

IBM 59

- **Indicator Lights:** Display functional in-

formation, such as data comparison and operation being performed.

- **Switches:**
 - Single-cycle
 - Error-retention
 - Motor-disable
