

## TYPE 31 DUPLICATING PUNCH

**Price:**  
Monthly Charge

**Model 1**  
\$25.00

**Cards:** 80 column only.

**Automatic Feed & Eject:** The Alphabetical Duplicating Punch ejects one card and feeds another automatically in .65 second. Cards placed in the master duplicating rack are handled manually. This machine is equipped with a Column Indicating Device as a standard feature.

**Speed:** The mechanical speed of operation is approximately the same as that for numerical punches. Duplication is accomplished at approximately ten columns per second.

**Duplicating Device:** The duplicating device is the same as on numerical duplicating punches. However, an "alphabet zone" hole in the 0, 11, or 12 positions in combination with a hole in positions from 1 to 9 in the same column can be duplicated. Unpunched columns can be duplicated if desired through the use of the Automatic Space Switch.

**Keyboard:** The Alphabetical Duplicating Punch is furnished with both an alphabetical and a numerical keyboard. The alphabetical keyboard is similar to that of a typewriter, except that the shift, tabular, backspace, and character keys are eliminated and a skip, release, stacker and "1" key have been provided. The numeral "1" key is used for "1" rather than the "L" key as on a typewriter. The alphabetical keyboard is equipped with a locking device. The keyboard is demountable and may be removed by the operator to facilitate numerical work.

**Special Devices:** See Special Devices section.
